

DATABLINK MANAGEMENT SERVER

A COMPLETE MANAGEMENT SOLUTION FOR
ADVANCED AUTHENTICATION & TRANSACTION SIGNING

FAST DEPLOYMENT OF YOUR ADVANCED AUTHENTICATION SOLUTION

Datablink Management Server is a complete management solution that implements Datablink's advanced authentication and transaction signing technologies within your network and applications. With just a few steps, organizations can deploy Datablink Management Server and begin configuring users, authenticators and endpoints for the best security and usability in the market. A complete solution, Datablink Management Server offers a secure administrative web interface, a user's self service portal, and comprehensive integration guides.

DEPLOY DATABLINK SOLUTIONS FOR:

- Client and clientless VPN authentication
- Cloud applications
- Windows logon
- Web applications and portals
- Internet banking authentication and transaction signing
- Online shopping
- Credit and debit card purchases validation

MAIN FUNCTIONS:

- Protocols: RADIUS, SAML v1.1/2.0 and Web Services
- Self-service portal
- Encrypted web based management
- Access time policies
- Customized access rights for administrators
- Audit events and tracking logs sent by syslog on the CEF format (Common Event Format) compatible with SIEM solutions.
- Customized time window and token blocking parameters
- Encrypted information within the database. (MySQL, SQL Server or Oracle).
- Generation of numberless groups of users interconnected with selected RADIUS, SAML or Web Service components
- Proxy function allows to easily migrate existing authentication solutions
- Scalable through the addition of active, synchronized servers
- Users synchronization with Microsoft AD and LDAP servers
- Integration guides for fast configuration and deployment on different applications

SEVERAL AUTHENTICATION METHODS

- Datablink Device 200 hardware token
- Datablink Mobile 200/110 tokens
- Datablink Desktop 100 token
- Virtual token for backup authentication (SMS, email, etc)
- Windows and fixed passwords

OPERATING SYSTEMS

- Windows Server 2008
- Windows Server 2012

USERS SYNCHRONIZATION

Datablink Management Server simplifies user management by offering the option to synchronize privileged users with existing users' databases in an LDAP or Microsoft Active Directory.

RADIUS, SAML AND WEB SERVICES

Through a few simple steps, users can integrate VPN services and Windows logon with RADIUS protocol. Home-developed applications, such as web servers, eCommerce applications, Internet Banking servers, Intranet server, B2B and B2C applications, and others, can also be easily integrated with advanced authentication and transaction signing technologies using screen blinking, QR Code, and Push.

Cloud applications can also be protected by using SAML, redirecting users to your authentication page.
