

# DATABLINK WINDOWS LOGON

ADVANCED USER AUTHENTICATION  
FOR WINDOWS MACHINES

## ADVANCED WINDOWS AUTHENTICATION

Datablink Windows Logon provides one of the highest levels of corporate security available today. Offering advanced authentication that mandates both user and device presence, Datablink Windows Logon ensures your employees, customers and corporate systems are protected from increasing cyber threats, such as socially engineered attacks, and network or account infiltration resulting from shared user names and passwords.

Best of all, because Windows Logon is designed to also work with a mobile-based application for out-of-band authentication, it is much more cost effective than other solutions on the market today. Authentication requires only one click, making it extremely easy to use, even for non-technical employees and customers, and very secure through the use of an automated challenge and response process.

Datablink Windows Logon is ideal for any company wishing to protect its sensitive information, including:

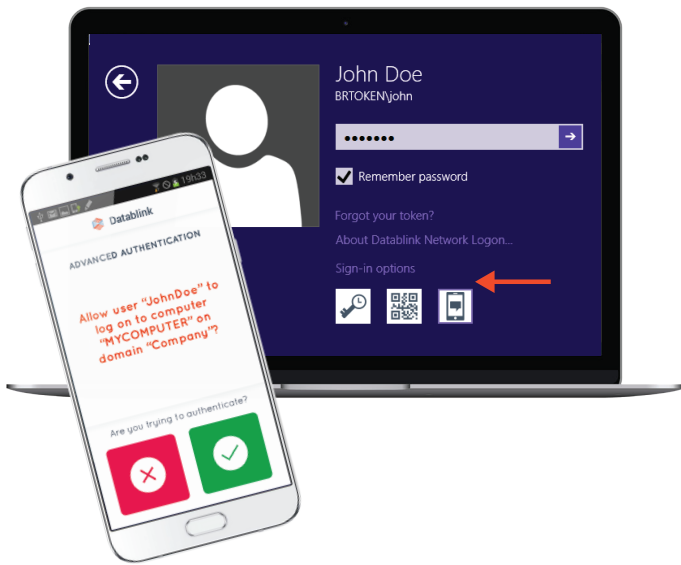

- Financial institutions such as banks, credit unions and insurance companies
- Health care organizations
- Corporations and other entities, including government, schools and universities.

### WINDOWS LOGIN PROTECTION ON:

- Laptops - online and offline
- PCs
- Servers
- Virtual Machines

## ONE TOUCH LOGIN

The “remember password” feature provides great usability. To login, all the user needs to do is click on “send push” and approve it on his personal mobile phone

## THE NEXT GENERATION OF MULTI-FACTOR AUTHENTICATION

Datablink Windows Logon goes beyond traditional authentication methods, such as simple user names and passwords, by enabling each user to authenticate using a mobile app that provides secure Windows-based logon. The authentication can be authorized through a push notification or QR code via a mobile device. Depending on your needs, Datablink can also provide authentication through a standard one-time password (OTP) option with either the mobile application or physical device.

## EASY IMPLEMENTATION

Datablink Windows Logon is easy to implement on any network, requiring only the Datablink Management Server to manage it. To better demonstrate the high level of security Datablink Windows Logon offers, Datablink can also provide a quick proof-of-concept implementation, with no complex requirements or extensive work needed; the POC can be up and running in just a few hours.

### AUTHENTICATION MODES

- QR Code
- Push Notifications
- Time-based OTP

### COMPATIBLE OPERATING SYSTEMS

- Windows Server 2008/ 2012
- Windows 7/8/10

### INSTALLATION REQUIREMENTS

- Datablink Management Server
- Datablink Mobile 200 or Datablink Device 200

## ABOUT DATABLINK

Datablink Inc. is a global provider of advanced authentication and transaction signing solutions.
